Education

University College London (UCL), London

2024 – 2028

Master of Engineering in Computer Science, minoring in Nanotechnology

- Expected First Class Honours (current weighted average: **80.8%**)

Work Experience

Ministry of Housing, Communities and Local Government, Manchester

Jun – Sept 2026

Statistics & Data Analyst Intern | R, Python, Excel

- Contributed analytical QA, data visualisation and public communication material for **3 official UK Government statistical releases**, receiving an **Exceptional Performance Scheme Award**
- Automated a data collection workflow with Python, reducing a recurrent manual process from **1.5 hours to under 5 seconds**
- Conducted an investigation into historical data consistency and quality, producing automated QA R scripts, combining datasets into a larger time series and extending statistical analysis capabilities
- Delivered technical training** on API automation and practical LLM adoption to the Housing & Planning Stats team

Projects

Football Practice - Industry Partner Project (MotionInput Games Ltd) | C#, Unity

Oct 2025 – Mar 2026

- Delivered a production-ready motion-controlled football training game for the **National Autistic Society** within a five-person team, culminating in **Microsoft Store release**
- Architected a modular shared-core Unity architecture using state machines, dependency inversion, logging and audio services to eliminate cross-module coupling
- Designed and implemented the Freekick minigame end-to-end using a state-driven lifecycle and deterministic physics with controlled randomness for consistent, replayable gameplay
- Developed **accessible UI/UX systems for neurodivergent users** through dynamic menu flows, difficulty scaling, and visual-audio synchronised interactions, earning **2nd place in the UCL Student EDI Award 2026**
- Authored system design documentation and deployment manuals for a live project website; presented to **20+ industry partners** at BettUK 2026 and UCL IXN Showcase

ReelTrust - HackLondon 2026 Winner | Kotlin, Presage SDK, Node.js, Solana, MongoDB Atlas

Feb 2026

- Won **“Best Use of Presage”** by Major League Hacking for technical innovation and execution at **HackLondon 2026** among **200+ participants**
- Built a full-stack deepfake detection and video verification platform in 24 hours using Kotlin, Node.js, and Solana
- Integrated Presage Android SDK for real-time facial micro-expression analysis, generating authenticity confidence scores for uploaded videos
- Designed a tamper-resistant verification pipeline by anchoring authenticity metadata to Solana and persisting records in MongoDB Atlas

UniverShell | C, Make

July 2026

- Developed and **released a cross-platform shell** in C supporting both Unix-like systems and native Windows
- Implemented lexical command parsing, platform-specific process creation and execution through a unified abstraction layer spanning POSIX and Win32 APIs
- Created a system agnostic build system with Make, developing custom macros for conditional builds

Student Grade Management System | Java, Spring Boot, TypeScript, React, H2 (PostgreSQL)

Oct – Dec 2025

- Led a 3-person team to develop a full-stack RESTful system for managing student and module records
- Developed a Spring Boot backend with DTO abstractions, global exception handling, and **100% JUnit5 test coverage**
- Created a React + TypeScript frontend with client-side validation, CSV import/export and automated PDF reporting

Leadership, Awards & Extracurriculars

- Programming Mentor, UCL (2026–27):** Provide programming tutoring, technical guidance and academic support to a group of first-year Computer Science students.
- MEI Ritangle – International Finalist 2021, 2022:** Applied algorithmic optimisation to team-based mathematical problems; **outperformed the official 2021 solution by 7%**
- EPQ – Fermat’s Last Theorem & Cryptography:** Researched Wiles’ proof, elliptic curves and their applications to cryptography and quantum computing, producing a mathematical report and presentation.
- 2021 GCSE Computer Scientist of the Year**

Technical Skills

Programming Languages: Python, Java, C, C#, R, TypeScript, Haskell

Libraries/Frameworks: Spring Boot, React, TensorFlow, NumPy, Pygame, JUnit

Tools: Git, GitHub, PostgreSQL, Docker, Unity, Make, Excel
